

AAROS SERIES

ACS8-1W

At less than 4" deep, Leon's ground-breaking Aaros 8" subwoofer redefines the possibility of large bass from a small enclosure. Soundly constructed to prevent unwanted resonance, this in-wall subwoofer is ideal for commercial office and hospitality applications where no floor space is available for a traditional sub. With color-matched perforated metal, easily installed pre- or post-construction, and paired with Leon's 1,000W subwoofer amplifier, this sub stands out by blending in.

- Cabinet design is less than 4" deep to fit into any in-wall application
- Paired with Leon's 1,000 watt Class A/B amplifier for deep, controlled bass
- Custom painted metal grills available to match any color
- Fully-sealed enclosures produce tight, accurate bass response

Recommended Pairings:

Horizon Hz250UT, Profile Pr250UT, Vault v400
